

Submersible Connector Covers -

Organic Lighting distinguishes itself by offering a complete product range of plug & play products. Beside the connector sets with different cable lengths, we offer inline connectors for both types of liniLED (Mono Color and RGB), extension cords, and submersible connector covers for an IP68 connection.

liniLED is waterproof for submersion but requires connectors and ends to be sealed for applications. The polycarbonate clamshell style cover fits over connectors and a permanent sealant seals the connection. The cover can be used over all types of liniLED connectors. Once in place the cover cannot be removed so operation integrity of the strip should be verified before installing.

Submersible Connector Cover sets are supplied complete with sealing resin, resin application, tape, and abrasive paper, and acid free silicone glue.
